

ABOUT US

One of the important goals of Tekfen Group of Companies is to provide effective engineering services for technologically demanding projects that require specialized know-how. Such projects include refineries, petrochemical facilities, terminal systems, and power stations for future EPC (Engineering, Procurement and Construction) projects of Tekfen Construction.

Tekfen Engineering was founded in 1984 to handle the engineering side of the EPC triangle for turnkey projects. Tekfen Engineering has also been contracted out of the Group in particular because of its experience in industrial plants and infrastructure projects.

Main areas of expertise could be summarized as follows:

- Industrial Plants
 - Oil Refineries
 - Petrochemical Plants
 - Fertilizer Plants
- Power Plants
- Pipelines & Infrastructure
- Harbor & Offshore Structures
- Motorways, Bridges and Viaducts

Tekfen Engineering is continuously developing its organization and equipment and, whenever required, it broadens its know-how and experience through collaboration with companies with relevant experience. To this end, process department was created in 2009 with the purpose of strengthening the Company for the ultimate goal of Tekfen Construction becoming a full EPC contractor.

To the same purpose, in 2009 Tekfen Engineering decided to implement computer aided 3D design modeling, especially for technologically demanding operations. The Company is taking an important step towards its goal of interdisciplinary integration and

attaining engineering perfection by developing its software and engineering tools.

Tekfen Engineering has developed and diversified considerably as a multi-discipline engineering and consultancy company since its formation in 1984. The Company still continues to grow in size and experience and provide services to complement the activities of Tekfen's associated companies and others.
